Graduate Researcher, University of Wisconsin-Madison
Advisor: Barry Van Veen and Matthew Banks

May 2021 – June 2022

- Modeled brain function/stimulus response captured from EEG data as a multivariate auto-regressive model with a group LASSO penalty based on fMRI data
- Utilized high-throughput computing and meta-scheduler DAGman to pipeline large-scale cross validation and model selection jobs in MATLAB
- Wrote a set of MATLAB functions to quickly assemble a submission to HTCondor systems, capable of launching up to hundreds of thousands of CPU jobs

Graduate Researcher, University of Wisconsin-Madison
Advisor: Dimitris Papailiopoulos

Sept. 2019 – Dec. 2021

- Designed and implement deep learning experiments in Python using the PyTorch framework
- Researched sparse and low-rank neural networks
